

Installing WordPress Plugin

Installing the WordPress plugin is quick and straightforward. After you have downloaded the archive with the plugin, you will see the file with the plugin inside. Unzipped purchased the product you will see inside the archive with the plugin **pluginname.zip** There are two ways to install it:

Installation of the Plugin through the WordPress Admin panel

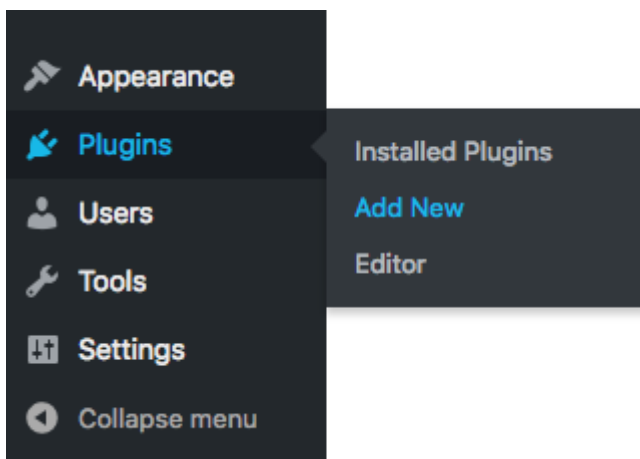

We recommend this variant for most users.

Step 1

First of all, open WordPress admin area login page and login in into WordPress as Admin. To do this visit **<https://your-site/wp-admin/>**

Step 2

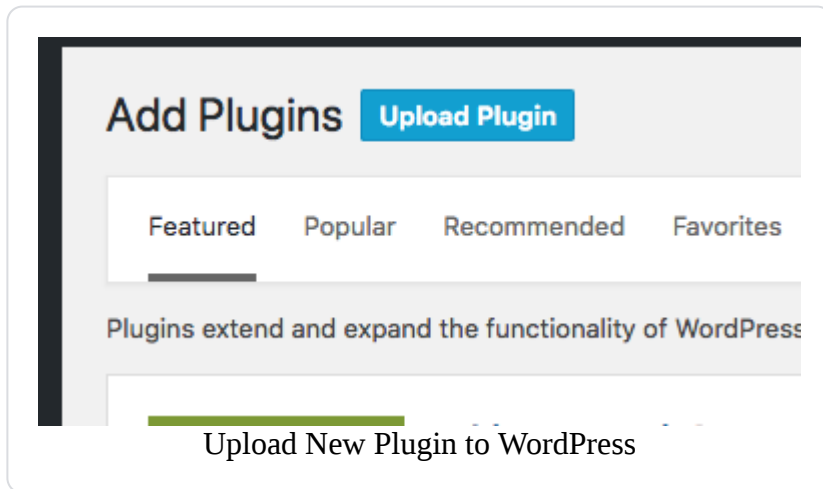

Go to **Plugins > Add New**

Add New Plugin to WordPress

Step 3

Click **Upload Plugin** Button

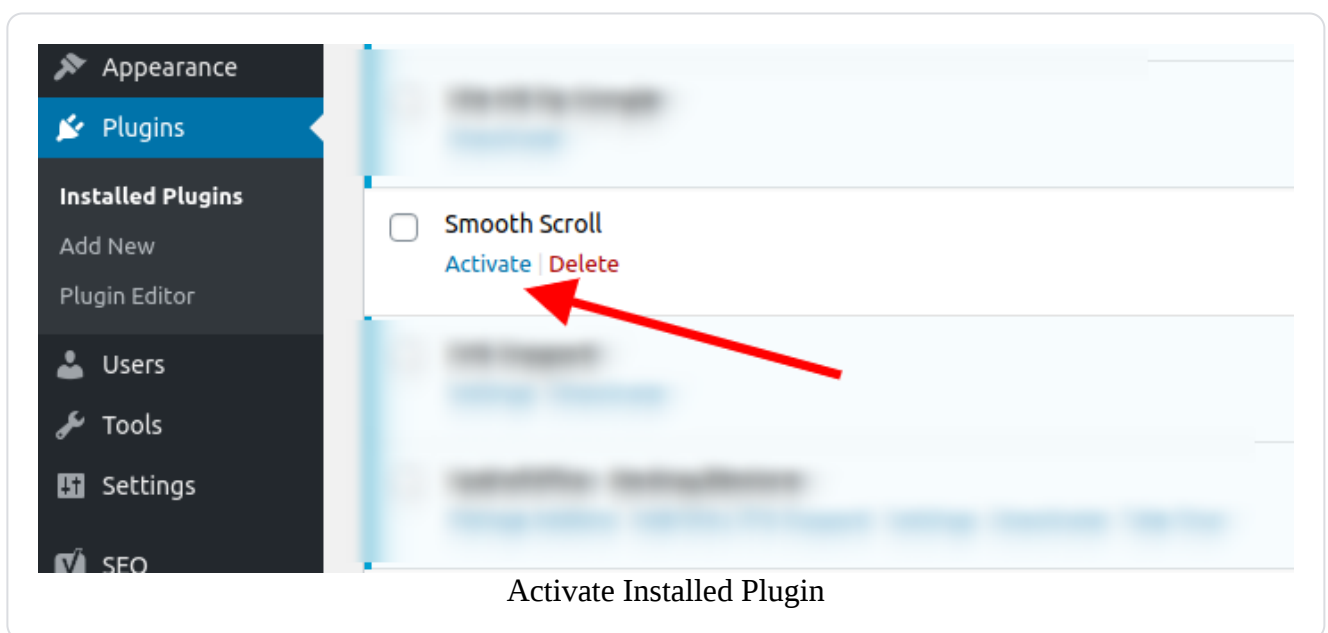

Step 4

Choose archive with Plugin and press **Install Now** Button

Step 5

After Installing go back to the Plugins page and click Activate below plugin title.

Installation the plugin through FTP

Step 1

Use Login and Password to connect to your web-server via FTP. You can find out your username and password on the website of your hosting provider.

Step 2

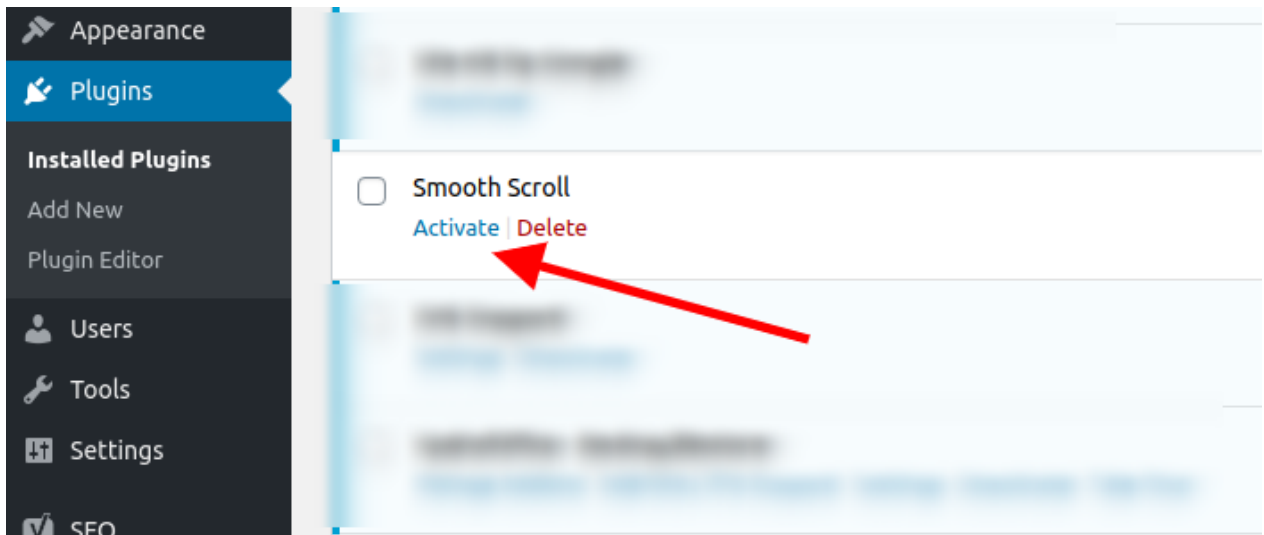

Upload plugin files to **/wp-content/plugins/** directory.

Step 3

If your plugin is zipped, you will need to unzip it.

Step 4

Go to the Plugins page and click Activate below plugin title.

Activate Installed Plugin
